SEA Releases Major Update to Its Z Systems Report Management Solution - TRMS

New enhancements improve search, image management, and provide added capabilities for AFP and DJDE viewing for z Systems users

Garden City, NY, December 13, 2018 (Newswire.com) - Software Engineering of America, a leading vendor of Data Center Management solutions on IBM z/OS and the IBM i (AS/400), announces the availability of TRMS 7.02, the latest release of SEA's z Systems Report Management Solution.

TRMS 7.02 represents a major leap in design, functionality and usability for TRMS customers with several major enhancements based on user requests and feedback. In this release, SEA has significantly enhanced search capability across multiple reports, enhanced features for security and image handling, simplified the installation process, and also added the capability, as additional licensable components, to view AFP and Xerox DJDE reports in its web interface.

"SEA remains committed to the mainframe marketplace and we continue to focus on enhancing our z Systems Output and Report Management solutions as the mainframe continues to evolve to support z Systems customers and their installations. This release of TRMS provides those customers that are looking to modernize their report management solution with a scalable and robust z Systems based option," said Jatin Thakker, SEA's Chief Operating Officer.

New enhancements in TRMS 7.02 include:

AFP & Xerox DJDE to PDF Support

Automatically convert and render txt reports with embedded AFP and DJDE code to PDF format for printing and/or viewing within the TRMS web interface. Offered as additional licensed modules.

Subject Indexing

Create indexes that enable searching for values across multiple different reports. For example, a Policy Number that might appear in a Claim report and a Customer Statement.

Image Handling

Easily manage and search for images within TRMS and associate the image with one or more reports. For example, a single image could be part of a design document and an instruction manual, etc.

Enhanced "Quick" Installation Procedure

Simplified process makes TRMS product installation or maintenance upgrade quick and easy.

Greater Support for External Security (i.e. IBM RACF, CA-ACF2, CA-Top Secret)

Greater flexibility and granularity for securing report resources.
