SEA Releases New absMessage Web Interface for Managed Services Providers

Service Points interface enables MSP's to easily monitor and manage system activity and critical resources across multiple clients.

GARDEN CITY, N.Y., January 8, 2019 (NewsWire.com) -

Software Engineering of America, a leading vendor of IBM i Automation, Monitoring & Security solutions, announces the release of a new web interface, for use by managed service providers, within the leading IBM i Message and Resource monitoring solution, absMessage.

The logo for absMessage, with 'abs' in a bold, dark blue font and 'Message' in a lighter blue font.

The new Service Points web interface in absMessage provides a console that leverages the latest web technology to allow Managed Services Providers to efficiently manage and monitor systems and critical resource activities for their growing customer base. This includes the ability to customize a number of functions, such as categorizing and grouping systems by specific clients, and more.

SEA's new Service Points interface was developed to support the growing number of MSP's SEA has been working within the IBM i marketplace, many of which use absMessage to monitor their client systems and partitions.

"SEA's Managed Service Provider model has seen great adoption, and as part of its commitment to its partners, it prioritized development of the new interface. Service Points is based on direct feedback from our MSP partners and provides them with an intuitive, easy to use interface to support their business in managing IBM i infrastructure for customers. The new web interface dramatically improves the ability of MSP's to identify critical issues and respond to them in real time," says Jatin Thakker, SEA's Chief Operating Officer.
