SEA Launches absScheduler, a New Job Scheduling Solution for the IBM i Market.

Growing customer demands drive SEA development towards a flexible, next generation scheduling solution.

Garden City, NY, March 8, 2018 (Seasoft.com) – Software Engineering of America, a leading vendor of IBM i Automation, Monitoring & Security solutions, announces the availability and general release of absScheduler, a next generation solution for IBM i job scheduling and workload automation.

absScheduler provides scalable and highly customizable job scheduling and automation capabilities for enterprises both large and small. Within absScheduler, enterprises can create simple or highly complex workflows for jobs running across their IBM i environment and monitor their entire scheduling environment from a central dashboard. absScheduler comes standard with both aneclipse based GUI interface and 5250 green screen interface.

Observing a lack of automated job scheduling options in the marketplace for IBM i customers, SEA developed absScheduler from the ground up to be extremely flexible in handling a myriad of customer requirements. "As business requirements and demands grow, enterprises are looking to make sure their job scheduling solutions have the flexibility to meet their needs now and for the future. SEA built absScheduler with an open, flexible architecture to give our customers a robust, scalable solution for the IBM i", said Jatin Thakker, SEA's Chief Operating Officer.

absScheduler comes standard as an all-in-one scheduling product that can centrally manage and monitor jobs across multiple IBM i systems and partitions with no additional required components to manage jobs across a networked environment.

absScheduler is part of the absSuite of products, which includes absMessage, SEA's system message and resource monitoring solution.

About SEA - Software Engineering of America

Established in 1982, Software Engineering of America (SEA) has built a global reputation as a leading provider of solutions on the IBM i and IBM z Systems. With products licensed at over 10,000 data centers worldwide, SEA's customers include 9 of the Fortune 10 and over 90% of the Fortune 500.

SEA offers solutions for enterprises to manage security, automate operations, and react to changing conditions on the IBM i. SEA's solutions for the IBM i (AS/400) include applications for job scheduling, message and resource monitoring, as well as a suite of IBM i security solutions providing end to end coverage for compliance, intrusion prevention & detection, auditing, encryption, user authority management, IBM i anti-virus protection and more.
