SEA Releases Update to its z/OS Total Report Management System (TRMS)

New features include streamlined user management & security, Web UI improvements, improved query capabilities, and support for cloud-based storage

Garden City, NY, August 1, 2023 (seasoft.com)

Software Engineering of America (SEA), a leading vendor of data center management solutions on the IBM Z & IBM i platforms, announces the immediate availability of TRMS 7.03, the latest release of SEA's Total Report Management System.

With TRMS 7.03, SEA continues its legacy of delivering advanced solutions for IBM Z report management, revolutionizing the way businesses handle their z/OS reporting needs.

The Total Report Management System (TRMS) is a powerful solution designed to facilitate viewing, archiving, distributing, and printing IBM Z reports and other z/OS system production outputs. IBM Z reports can be accessed and viewed online using standard 3270 terminal interfaces or modern user experiences such as Web UI and RESTful APIs. Reports can be securely transformed into popular formats such as Excel, Word, PDF, HTML, and plain text. Indexes can be generated for efficiently searching across multiple reports & quickly viewing archived reports.

New Features in TRMS 7.03 include:

Enhanced Security: Ensures the security and integrity of sensitive report data using System Authority Facility (SAF) integration

Significant Web UI Improvements: Provides a more modern, intuitive experience for report access & interaction using IBM HTTP server

Cloud-based Report Storage: Adds additional report storage options using cloud-based object storage services, such as Amazon Simple Storage Services (AWS S3) object store

Flexible Report Viewing: Enables greater flexibility in IBM Z report presentation, tailoring report viewing to business needs using new report query options

To learn more about the exciting new capabilities available with TRMS 7.03, email SEA at info@seasoft.com, contact SEA at 800-272-7322 / 516-328-7000 or go to TRMS product page.
